*Problem Background*

- *Comparing anything can be simple, but when you get to a scale of more than 10 people it can get complicated.*
- *Currently no platform exists where a user can upload a song, clip, movie, etc. to be ranked by them and/or others.*
- *In a group of many people, it can be hard for everyone to voice their opinion.*

*Target*

*Allow multiple users to rank different types of content, while having said content on the same platform in a simple and efficient way.*

*Causes*

- *Big groups of people make ranking things as a group more difficult*
- *There are no services where multiple people can compare, and or rank multiple types of content.*
- *It's hard to rank with said content being hosted on another platform.*
- *If someone changes their opinion, it can complicate the whole ranking system*

*Countermeasures*

- *Create a platform for users to be able to create and rank content.*
- *Allow users to change their opinion / rank and everyone else see*
- *Allow users to be able to add any content and it be ranked by the rest*
- *Allow if desired the user who created the tierlist make their own ranking at the end*
- *Lists could be archived and saved for future references.*

*Check/Evaluate*

- *Users were able to compare different types of content with ease.*
- *Users made lists that could use to introduce other people to a different style of content*
- *The content was saved and archived for new users to view if desired.*

*Act/Standardize*

- *Keep the platform behind login, that way users can keep their lists private with their group if desired.*
- *User feedback will be taken into consideration and implemented if needed.*
- *Expand the design and purpose of the platform to make users life easier.*
